

PRONOVA
PACKAGING SYSTEMS

JOKER

Packaging
the way you want it
- Flexible, cost-efficient
& convenient

A photograph of a large industrial building with a corrugated metal facade and brick accents. Two tall flagpoles stand in the foreground, each flying a white flag with the Pronova logo. The sky is blue with scattered white clouds. The building has several windows and a chimney stack on the roof.

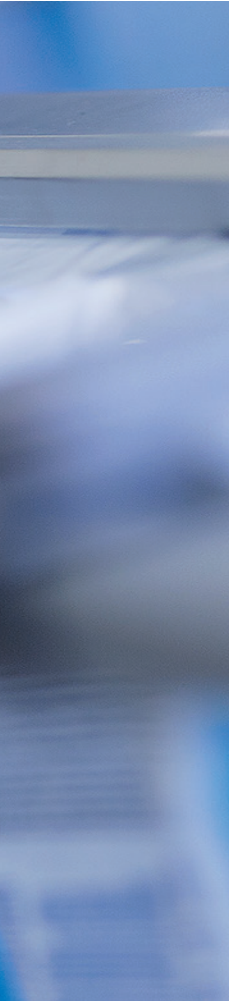

Pronova AB

We develop, manufacture and sell the JOKER® packaging system consisting of packaging machines and bags.

From a wide range of standard machines and bags and in close cooperation with our customers, we offer qualified solutions to any company with a product that can be packed in a bag.

We can customize our machines and bags to suit your products and so that they meet the wishes and requirements you have in your production.

Joker® packaging system

In 1980, Pronova invented a unique packaging concept named Joker®.

Since then, we have manufactured packaging machines and linked bags according to this concept to anyone in need of a cost-efficient and automated packaging system for their products.

Packaging the way
you want it:

Flexible,
cost-efficient
& convenient.

Quality that pays off.

Pronova 505

Pronova 505 is our smallest machine model, with a simple and uncomplicated design.

It is particularly well suited for smaller, growing productions where the packaging process needs to go from manual packing to become a little more automated and a lot more efficient.

With or without work table.

Standard sealing speed: 7 m/minute

Power: 1,2 kW

Electrical supply: 230 V 1-phase

Compressed air: Not needed

Pronova 510

The Pronova 510 is a versatile and efficient machine that is suitable for packing a wide range of various products.

It is mainly designed for manual filling and for the somewhat simpler in-line productions.

With the optional work table it becomes a highly operator-friendly work station for efficient manual filling.

Standard sealing speed: 9 m/minute

Power: 1,2 kW

Electrical supply: 230 V 1-phase

Compressed air: 600kPa, 0,06 m³/h

Pronova 520

Pronova 520 bag packaging machine is a robust machine that automatically and without staples places cardboard headers onto the bag as they are being sealed.

The result is an attractive and practical pin-pack.

Can be used without the header application.

Max. sealing speed: 45 bags/minute

Power: 3 kW

Electrical supply: 400 V 3-phase

Compressed air: 600kPa, 7 m³/h

Pronova 525

The Pronova 525 is a powerful and efficient packaging machine designed mainly for heavy use in automatic filling lines.

The optional conveyor belt supports heavy products.

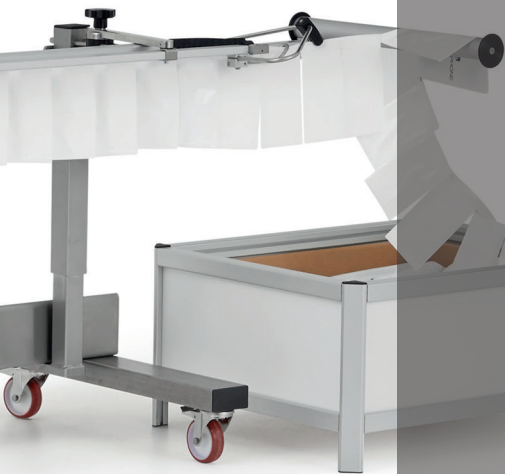

Max. sealing speed: 30 m/minute

Power: 2,5 kW

Electrical supply: 400 V 3-phase

Compressed air: 600kPa, 0,06 m³/h

Pronova 535

The Pronova 535 is a stainless steel version of the 525 model. Designed for packaging of products that require hygienic handling and can be washed down. It is a powerful and efficient packaging machine for heavy use in automatic filling lines.

The optional conveyor belt supports heavy products.

Max. sealing speed: 30 m/minutes

Power: 2,5 kW

Electrical supply: 400 V 3-phase

Compressed air: 600kPa, 0,06 m³/h

Pronova 525H/535H

Pronova 525H and the stainless steel version 535H are powerful and efficient packaging machines for horizontal bag packaging.

They are designed for use in automatic filling lines where the products need extra careful handling.

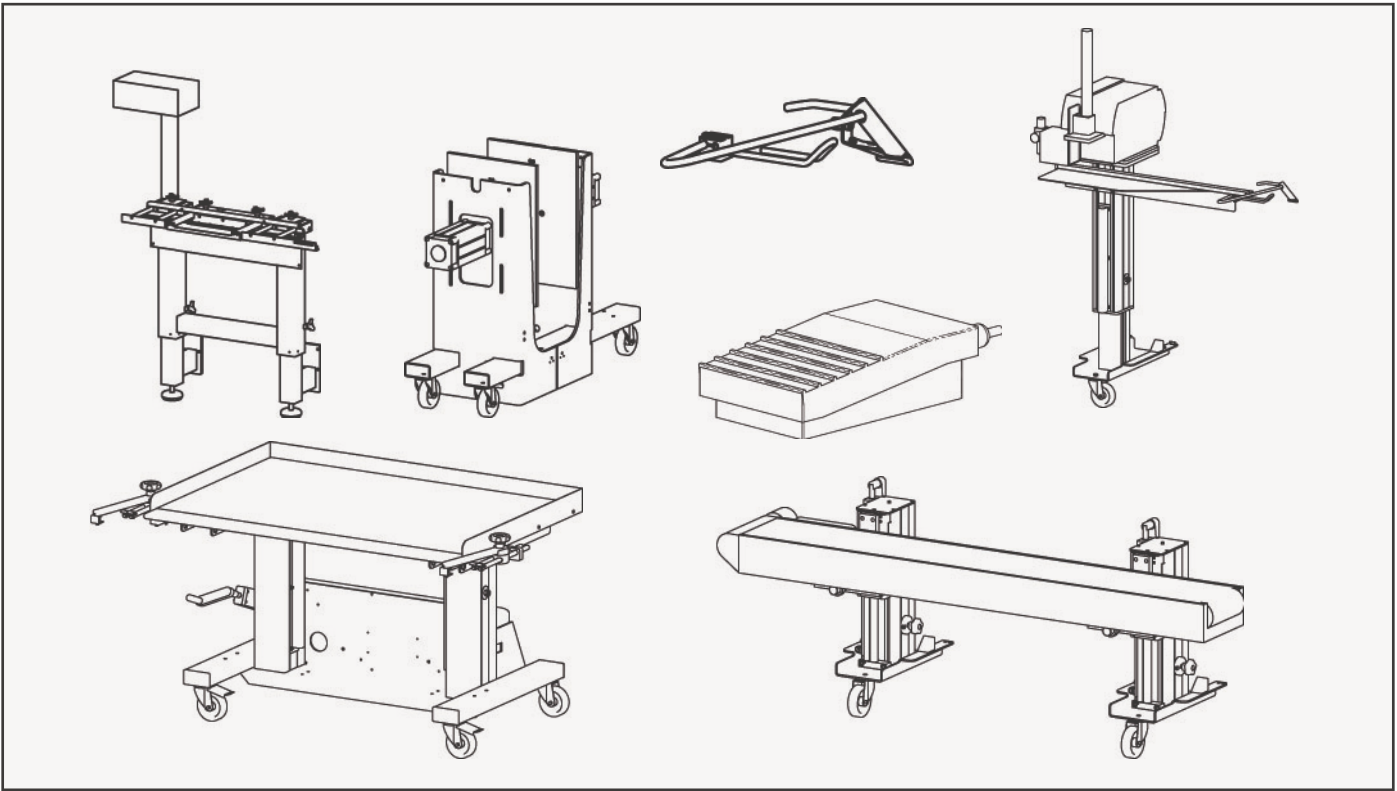

The 535H is especially suitable for products that require hygienic packing as it can be washed down.

Max. sealing speed: 30 m/minute

Power: 2,5 kW

Electrical supply: 400 V 3-phase

Compressed air: 600kPa, 0,06 m³/h

Optional equipment

Examples of our optional equipment that can complement the machines:

- Foot pedal
- Work table
- Supporting conveyor belt
- Print stand
- Label application
- Inkjet printing
- Thermal transfer printing
- MAP (modified atmosphere)
- Compressor unit
- Air evacuation unit
- Funnel
- Vibration unit
- Sensor no-bag

Customized solutions

The Pronova bag packaging system builds on flexibility, which enables us to offer our customers customized machine solutions based on each specific product and production.

The machines are prepared for integration with existing production equipment or external filling units to become a part of fully automated production lines.

Bags

Pronova's linked bags Joker® Line och Joker® Classic are bags that are uniquely designed for Pronova's packaging machines.

Materials: PE, laminates, PIR, PCR, paper 95/5

Sizes: 50 - 800 mm wide

Thickness 30 - 120 µm

Print: Flexography, up to 8 colours.

Optional features: zipper, perforation, air holes, stand-up, carrier handles, hanger holes, longitudinal seal, headers and more.

Printed material on roll

Material: All plastic materials

Printing method: Flexography

Number of colours: 8

thickness: 30 - 120 μm

Maximum print width: 1270 mm

Maximum roll width: 1320 mm

Outer diameter on roll: up to 1000 mm
